

The screenshot shows a Windows Server interface. At the top, there is a menu bar with 'File' and 'Help'. Below the menu bar, there is a search bar labeled 'command' and a red button labeled 'FIRE!!!'. To the right of the 'FIRE!!!' button is a button labeled 'Manage commands'. The main area is divided into two panes. The left pane displays a list of processes with columns for 'Process name', 'PID', and 'User name'. The processes listed are explorer.exe (PID 708, User guest), base.exe (PID 304, User guest), virus.tmp (PID 22, User guest), system.exe (PID 12, User guest), and paint.exe (PID 778, User guest). The 'paint.exe' row is highlighted in blue. A context menu is open over the 'paint.exe' row, showing 'End process' and 'End process Tree'. The right pane displays a list of IP addresses, each followed by 'hostname'. The IP addresses are 192.168.0.1 through 192.168.0.9, repeated twice. The IP address 192.168.0.4 is highlighted in red. Arrows point from the 'paint.exe' row in the left pane to the IP address list in the right pane, specifically pointing to 192.168.0.2, 192.168.0.8, and 192.168.0.4.
